## HALO. | Fused-Core ${ }^{\circledR}$ Particle Technology

Application Note: $175-\mathrm{M}$

## Separation of Patulin and HMF on HALO® $90 \AA$ Biphenyl

## PEAK IDENTITIES:

1. 5-(Hydroxymethyl) furfural
2. Patulin

## STRUCTURES:

Column: HALO 90Å Biphenyl, $2.7 \mu \mathrm{~m}, 2.1 \times 100 \mathrm{~mm}$
Part Number: 92812-611
Mobile Phase A: water with $0.1 \%$ acetic acid
Mobile Phase B: acetonitrile with $0.1 \%$ acetic acid

$$
\begin{array}{lll}
\text { Gradient: } & \frac{\text { Time }}{} & \frac{\% B}{5} \\
& 2.0 & 5 \\
& 2.6 & 90
\end{array}
$$

Flow Rate: $0.6 \mathrm{~mL} / \mathrm{min}$
Initial Pressure: 285 bar
Temperature: $40^{\circ} \mathrm{C}$
Detection: UV 276 nm, PDA
Injection Volume: $1.0 \mu \mathrm{~L}$
Sample: Apple Juice spiked with HMF and $50 \mathrm{ng} / \mathrm{mL}$ Patulin
Data Rate: 100 Hz
Response Time: 0.025 sec

5-(Hydroxymethyl) furfural

Flow Cell: $1 \mu \mathrm{~L}$
LC System: Shimadzu Nexera X2

Patulin

In the United States the FDA maintains different limits for mycotoxins in many foods and beverages. Patulin, a mycotoxin that is produced from mold on a variety of fruits has a limit of $50 \mu \mathrm{~g} / \mathrm{kg}$. For analysis, patulin was spiked into apple juice and the sample was cleaned up using solid phase extraction. Interfering analytes such as 5-(Hydroxymethyl) furfural (HMF) can make analysis more challenging. This separation shows the two compounds separated on a HALO ${ }^{\circledR}$ Biphenyl column with enough resolution to easily check for sample recovery.
